پاسخ سوال اول

قسمت های خواسته شده در نوتبوک پیاده سازی شده اند. نتیجه نهایی:

منابع

پاسخ سوال دوم

ياسخ سوال سوم

الف) با روش luminance عكس رنگى را به سياه سفيد تبديل ميكنيم. ازين رابطه استفاده ميكنيم:

$$Y = 0.299R + 0.587G + 0.114B$$

ب) از تابع bilateralFilter استفاده میکنیم که به خوبی میتواند نویز را با حفط لبه ها حفظ کند. البته سه هایپرپارامتر d و sigmaColor و sigmaColor را باید مقداردهی کنیم که با کمی تغییر به مقادیر مناسبی رسیدم.

پ) از لبه یاب Canny در cv2 با دو ۵۰ threshold و ۲۲۰ استفاده کرده ام و به خوبی لبه های کاغذ که هدف ماست پیدا شده و البته نوشته ها هم مشخصند.

ت) مطابق توضیحات نوتبوک جلو رفتم و ۴ گوشه به خوبی با findcontour پیدا شد.

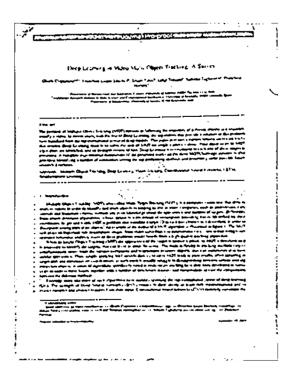

ث) مطابق توضیحات نوتبوک جلو رفتم و متوازری الاضلاع به خوبی به مستطیل تبدیل شد.

ج) برنامه CamScanner ممکن است از الگوریتم پیچیده ای برای رسیدگی به موارد مختلف استفاده کند. اما من سعی خواهم کرد یک رویکرد اساسی برای چنین مشکلی را پوشش دهم، ایده اصلی در اینجا Binarization تصویر ورودی داده شده است، یا به طور دقیق تر می توانیم بگوییم Theresholding تصویر داده شده.

The predicts of Mediple Object Training (MOT) consists in following the unjectory of different objects in a sequence, usually a video. In access years, with the rise of Deep Learning, the algorithms that provide a solution to this problem.
Processed. A complete experimental comparison of the presented works on the three MOTChallenge dissists is also provided, identifying a number of similarities aroung the top-performing methods and presenting some possible future.

and the control of th
1. Introduction
Multiple Object Trackles (MOT), also called Melai Target Tracking (MTT), it a computer vision task that time to
making witten in order as identify and track objects belonging to one or more categories, such as pedestriant, cars,
and instruction and instrument objects, without any prior knowledge about the appearance and numbers of targets, University
 from object detection algorithms, whose cotout is a collection of rectangular bounding boxes identified by their coordinates, beight and width, 310T algorithms also associate a larger ID to each box (known as a detection), in coder to
and the second larger of the common of the custom of a MOT algorithm is Wasterfeld in figure 1. The MOT
rack advers an important role in contractor vision; from vision surveillance to autonomous cars, from action recognision
so crowd behaviour analysis, many of these problems would benefit from a high-quality tracking algorithm.
While in Single Object Tracking (SOT) the appearance of the rarger is known a priori, in MOT a detection step is accessary to identify the targets, that can leave or enter the steps. The male difficulty in tracking multiple targets.
. Limit researche street from the various occinions and interactions between objects, that can sometimes also have
taking programs. Thus, simply pocking SOT models directly to solve MOT leads to poor retails, often including in
useget drift and accordant ID awhich errors, as such models associly sungale in distinguishing between similar locking interacture objects. A series of algorithms specifically assed to make our reacting have then been developed in recent

اگر یک تصویر دارای شرایط نوری متفاوت در مناطق مختلف باشد. در آن صورت، adaptive thresholding می تواند کمک کند. در اینجا، الگوریتم threshold یک پیکسل را بر اساس ناحیه کوچکی در اطراف آن تعیین می کند. بنابراین آستانه های متفاوتی را برای مناطق مختلف یک تصویر دریافت می کنیم که نتایج بهتری برای تصاویر با روشنایی متفاوت می دهد. و وضوح تصویر زیاد شده است.

اما چون این قسمت نویز نمک و فلفل زیادی را در تصویر ایجاد کرده است، سعی در حذف آن با فیلتر median هم داشتم که نتایج خوب شود:
